PROFESSIONAL SUMMARY

Data Analyst-track MCA graduate with IEEE-published research and hands-on SQL, Python, Excel, and Power BI experience across enterprise and independent analytics projects. Skilled in building predictive churn models, revenue-at-risk analyses, marketing ROI dashboards, and statistical hypothesis testing to turn raw data into stakeholder-ready insights.

EDUCATION

Master of Computer Applications — Amrita Vishwa Vidyapeetham (CGPA: 9.04)

Jul 2024 – May 2026

Bachelor of Computer Applications — University of Calicut (CGPA: 9.09)

Sep 2021 – Mar 2024

PROJECTS

SaaS / Subscription Churn Prediction & Analysis (SQL, Python, Scikit-learn, Power BI, DuckDB)

May 2024 – July 2026

- Built an end-to-end churn analytics pipeline using SQL, Python/Pandas, and an explainable Scikit-learn Logistic Regression model, engineering features (tenure buckets, monthly-charge-per-tenure, contract-type indicators) and validating it via calibration, threshold tuning, and coefficient analysis across 7,043 customers.
- Translated churn probabilities into Expected Monthly Revenue at Risk, quantifying \$123.24K in exposure and 619 Priority-1 customers representing \$32.13K of that risk.
- Designed a Power BI star-schema dashboard revealing 42.71% churn among month-to-month customers and 47.44% among 0–12 month tenure customers, converting findings into a stakeholder-ready retention business case.

Marketing Campaign ROI Dashboard (Python, Power BI, DAX)

Feb 2026 – Apr 2026

- Analyzed 200,000+ marketing campaign records using Python (Pandas, NumPy, SciPy) to validate data quality, engineer CTR, and evaluate campaign performance across channels, customer segments, and quarterly periods.
- Built an interactive 3-page Power BI dashboard on a dimensional star-schema model with DAX, covering KPI performance, channel/segment analysis, ROI trends, and channel × customer-segment interactions.
- Applied descriptive statistics and one-way ANOVA to test channel-level conversion-rate differences ($p = 0.7159$, $\eta^2 \approx 0.0000145$), translating results into an evidence-based recommendation against channel-based budget reallocation.

E-Commerce Sales & Customer Churn Analysis (PostgreSQL, SQL, Microsoft Excel)

Nov 2025 – Jan 2026

- Validated 99K+ orders and 112K+ order-item records through duplicate, null, and relationship checks to build a reusable Analytical Base Dataset in PostgreSQL.
- Engineered customer-level purchase, retention, and churn metrics using SQL CTEs, joins, aggregations, and window functions, implementing a 180-day inactivity-based churn proxy with recency segmentation.
- Designed an executive Excel dashboard (PivotTables, Pivot Charts, XLOOKUP, Conditional Formatting, KPI cards, Slicers) to analyze sales, acquisition, and retention risk; identified 60.49% churn and ~96.95% one-time buyers.

SKILLS

Data & Analysis Tools: SQL (PostgreSQL, DuckDB), Python (Pandas, NumPy, SciPy, Scikit-learn), Excel (PivotTables, XLOOKUP, Power Query), Power BI (DAX), Tableau, Matplotlib

Programming Languages & Tools: Python, SQL, Java, C, HTML, CSS, Git, GitHub, PowerPoint, Word

Business Analysis & Concepts: Statistical Analysis & Hypothesis Testing, Predictive Modeling, Requirements Gathering, User Stories, Agile/Scrum, UAT, Stakeholder Communication, Data Quality, Process Optimization, SDLC, DBMS, OOP

EXPERIENCE

Data & Process Analyst Intern — Orion Innovation

Jan 2026 – Jul 2026

- Configured SQL-based data bindings and workflow logic on the KPMG Clara platform, translating business requirements into functional, data-driven workflow components.
- Validated data outputs and workflow behavior across country-specific customizations, collaborating with stakeholders to resolve discrepancies.

Data Analytics Job Simulation — Deloitte (Forage)

Apr 2026 – May 2026

- Analyzed case-based datasets to identify risk indicators and documented findings for stakeholder reporting.

CERTIFICATIONS

- Google Data Analytics Professional Certificate — Google
- Generative AI for Data Analytics — Coursera / IBM

PUBLICATIONS

- “Explainable Credit Risk Assessment using Graph Neural Networks and Synthetic Data Augmentation” — IEEE 2026 (co-authored) — DOI: [10.1109/ICIRCA69024.2026.11570516](https://doi.org/10.1109/ICIRCA69024.2026.11570516)
